Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

This row of four two-bay-wide, two-story brick houses with low-pitched gable roofs are typical of the small alley houses built in Baltimore in the 1850s and 1860s, often along especially narrow secondary alley streets running perpendicularly off the main "alley" street. In many cases, alley houses such as these are still occupied by working class families and many are still covered with the formstone put on in the 1950s or 1960s.

The houses are two stories in height, 12' wide (the west end house is 14' wide), and occupy lots 63' deep. Each house has a one-story brick rear kitchen addition somewhat narrower than the house. The pitch of the gable roof is especially low, a characteristic of this particular type of two-story, gable-roofed alley house. The houses are constructed in running bond, which was always painted, but now the facades have been cleaned and left unpainted. Each house has a simple brick corbelled cornice. Chimneys are located at the peak of the gable roofs.

Door and window openings have flat wood lintels and sills, but all windows are filled with 1/1 replacement sash. No original doors survive and all openings are filled with modern six-panel doors, set beneath a single-light transom. The houses sit on high, lit by a single-light sash. Each entrance is reached by four new brick steps, set parallel with the façade.

The houses are basically two rooms deep, with the front room being entered directly from the front door. The front and back rooms of the first floor are separated by a wide opening, with the tightly winding, narrow stairs set in the rear room, in the space between the partition wall and the fireplace.

<input type="checkbox"/> 1900	<input type="checkbox"/> communications	<input type="checkbox"/> industry	<input type="checkbox"/> politics/government	<input type="checkbox"/> transportation	
		<input type="checkbox"/> invention		<input type="checkbox"/> other: specify	

**Specific dates**

**Builder/Architect**

Prepare both a summary paragraph of significance and a general statement of history and support.

This group of houses is significant as representing a very plain type of small street house that was constructed to provide inexpensive housing for the working class residents of the area, most of whom were German or Irish at the time of construction. The houses were built according to a pattern that was quite common to the city's working class neighborhoods of the middle and late nineteenth century. Recognizing that workers held different levels of jobs (and pay), builders created a hierarchy of house sizes (and prices) in the new neighborhoods going up to serve the expanding factory districts ringing the harbor and north-east and southwest of the central city. Builders acquired anywhere from an eighth to a half of a city block and built 14' to 15'-wide two-story houses on the main streets, and smaller, 11' to 13'-wide two-story houses on the narrower streets bisecting the blocks. Typically, in this period, main street houses might sell \$1,000 - \$1,500; small street houses for \$600 - \$800. Occasionally, the builder retained ownership of his small street houses to provide income for himself as rental properties. In this way people of varying means could afford to live in the same block. If they couldn't afford the purchase price of the small street houses, then they *could* afford the \$8 or so a month it would cost to rent one, while they saved to be able to buy their own home later.

The houses are especially significant because of their proximity to the Baltimore & Ohio railroad yards, the nation's first railroad, and its related railroad-oriented industries, like car and rail shops. Housing of this type was built to provide inexpensive housing for the wide variety of both Irish and German immigrants who came to southwest Baltimore to work in railroad-related industries in the decade before the Civil War.
